

Carrington

Based in Lancashire, Carrington Workwear Ltd manufacture 30% of the finished fabric in Europe. They produce workwear, technical, coated and laminated and defence fabrics - satisfying many technical and critical safety requirements.

Carrington Workwear replaces spreadsheets with database-driven web applications

"As the business grows and changes, we continually look for efficiency-improving ideas. This means that IT must become smarter and **provide data and new solutions for modern business operations**. This is why we licensed m-Power from mrc.

Using m-Power, **we now provide instant access to critical management information** directly from ASW--our ERP system. Our users enjoy more meaningful management information sooner. **Our former unwieldy, Excel-based budgeting process** involved much rekeying. **Our new m-Power solution** works at all the levels we require, complete with automated projections and comparisons year on year. It **saves us endless emails and iterations**, plus we can now analyse our business by any criteria.

We must record and track all of the product tests performed in our labs. We **replaced our paper and spreadsheet system with a database solution** that also prints formal specification documents for the finished products.

Our offices in France and Germany and our agent in Russia can now easily **access real-time production plans and order data, saving emails and phone calls**. We plan on creating an order entry portal for Russia using m-Power.

m-Power lets us **keep up with the business**. It saves us time and money in everything we do, making it a great agile development tool."

"It has moved us forward more than any other product. Everyone can see the benefits"
